

iDrix

TECHNOLOGY S.A

ABOUT US

¿Why IDRIX?

The name iDrix was born because the letter i means INNOVATION and Drix means CONSTANCE, managing the concept of constantly innovating, being the LEADER technology company IN DIGITAL TRANSFORMATION.

Start of Activities in iDrix Technology

IDrix Technology begins its commercial activities on February 20, 2017 in the city of Santo Domingo - Ecuador. Since that date, the company iDrix Technology has been developing software products for the sectors: health, commercial, financial, delivery, among others.

iDrix Technology's History

A team of engineers passionate about technology come up with the idea of creating a software development company with specialized knowledge, where companies can find all the technological services of industry 4.0. Providing a comprehensive and differential service so that companies can digitize their processes and implement something new that adds value.

Mission

We are a technology company, dedicated to advising, presenting and implementing new information and communication technologies that meet the needs of our clients, providing a comprehensive service with a high quality standard to national and international companies.

To be the technological company recognized nationally and internationally, for having innovative products in the market, and for the excellent service dedicated to the client, compliance with high quality standards.

Vision

Values

1

Attitude of our staff that is reflected in compliance with the protocols, in loyalty, responsibility and institutional commitment, generating value for the benefit of our clients.

2

Full knowledge of current technologies, creating a culture of learning from technologies and from our clients, having qualified and proactive personnel that contribute to improving the service.

3

Virtue of our staff to act with honesty and transparency, oriented towards efficiency and optimization of institutional resources.

4

With the new information and communication technologies "Tics" we opt for innovation, in the improvement or development of new products and/or services that increase productivity, effectively meeting the requirements and needs of our clients.

5

Provide information security, transparency, and quality in the products and services offered, always maintaining the trust of our customers.

Company Constitution

On July 15, 2021, the COMPAÑÍA DE INNOVACIÓN TECNOLÓGICA IDRIX TECHNOLOGY S.A was established with headquarters in Santo Domingo - Ecuador, with the following commercial activities:

Management services and on-site operation of customer computer systems and/or data processing facilities, and related support services.

Adaptation of computer programs to the needs of clients, that is, modification and configuration of an existing application so that it can work properly with the information systems available to the client.

Design activities of the structure and content of the following elements (and/or writing of the computer code necessary for their creation and application): Operating system programs (including updates and correction patches), computer applications (including updates and patches of correction), databases and web pages.

Operation of websites that function as Internet portals, such as broadcast media sites that provide regularly updated content and those that use a search engine to generate and maintain extensive databases of Internet addresses and content in a format that facilitates the search.

Application services.

Provision of infrastructure for hosting services, data processing services and related activities. Includes specialized hosting activities, such as: hosting of websites, applications, video streaming services over the Internet.

Services

- Software development
- Mobile application development
- Website Design
- Electronic billing
- Cloud Computing
- Technical Support
- Computer Networks
- Computer Expertise
- Digital Marketing
- Business intelligence
- Advice and Training
- Blockchain
- Big Data
- Machine Learning
- Internet of things
- Informatic Security

Services

Software Development

iDrix Technology S.A, a company specialized in technology and innovation, is dedicated to the development of customized Software based on the needs and expectations of the client, through the quality function deployment (QFD) methodology.

The custom Software Development that we provide is built and designed with new generation technologies, and is exclusively according to the needs, criteria, resources and budget of each Company.

Mobile Application Development

We develop hybrid and native applications for Android and IOS operating systems, with an excellent user experience based on the Design Thinking methodology. We have extensive knowledge to index ASO and have app positioning so that you can be found in the Play Store, Huawei AppGallery, App Store stores.

Website Design

At iDrix Technology, we design and develop modern web interfaces that will significantly improve your company's presence and image. We are a professional web design agency with a national and international presence.

We design modern and high-impact web pages at the best market price. Website design encompasses several different aspects, including web page design, content production, and graphic design.

Electronic Billing

At iDrix Technology S.A. We advise you throughout the process of implementing electronic invoicing, providing complete training on the use of the invoicing system in a test environment for a better learning process, as well as 24/7 support, with 98% high availability.

Cloud Computing

Cloud computing or cloud computing is a technology that allows remote access, from anywhere in the world and at any time, to files and data processing through the Internet.

All your cloud computing as a service and hosted in Data Centers: Google Cloud, Amazon AWS, Microsoft Azure. You can solve needs regarding the scalability and flexibility of the infrastructures that make your applications available, paying only for consumption.

Technical Support

At iDrix Technology, we provide Technical Support to companies and people seeking solutions to breakdowns, whether physical (hardware) or logical (software) of computers - computer equipment.

Computer Networks

We install Category 5e and Category 6 copper structured cabling infrastructures, fiber optic cables and wireless networks. We advise and supply all kinds of computer network materials.

Computer Expertise

Forensic Computer Expertise is a process of extraction and analysis of digital content carried out by a Computer Expert, who must be legally accredited by the Council of the Judiciary.

As Computer Experts we work with the most sophisticated tools for the treatment of information and analysis of computer crimes. Applying international methodologies ISO / IEC 27037:2012, ISO / IEC 27001:2013 and the good practices of the RFC 3227 guidelines.

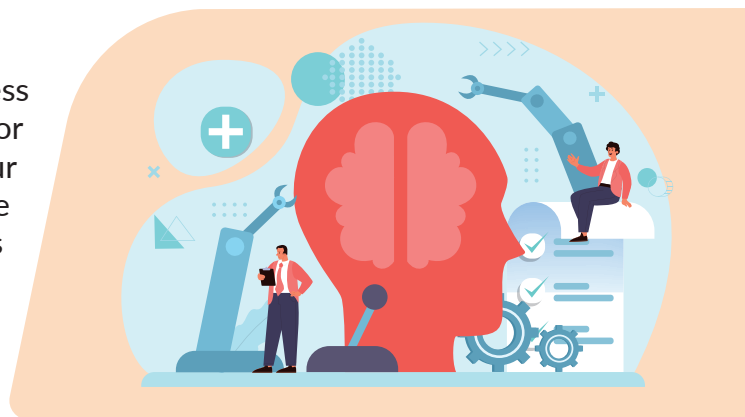

Digital Marketing

With a good Digital Marketing plan you can enhance the reach of your brand to reach new customers, interact with your followers, we create trust and loyalty for your business. To do this, you must previously define what you want to achieve, to whom you want to direct the communication and how the actions are going to be carried out.

Business Intelligence

At iDrix Technology, thanks to Business Intelligence, we automate your systems for accurate and fast decision-making for your business, discover the power of data. We guarantee that the information you handle is coherent, updated and well structured.

Advice and Training

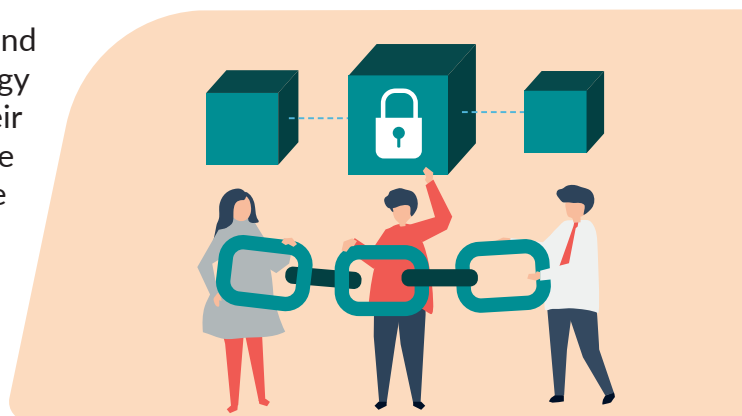

In our Company iDrix Technology S.A, we design Consulting and Training Programs based on competencies. We provide the knowledge you need quickly and efficiently.

We provide companies with solutions in the ways of managing and doing business, analyzing their functional structure, their personnel, evaluating strategies, optimizing processes, reviewing their control system and working closely with market opportunities.

Blockchain

At iDrix Technology S.A, we develop smart and secure projects thanks to Blockchain technology that allows us to keep transactions intact in their data chain, once the transaction is recorded in the Blockchain it is practically impossible to change that data, thus avoiding possible scams or manual manipulation of the information contained in a database by the DBA.

Big Data

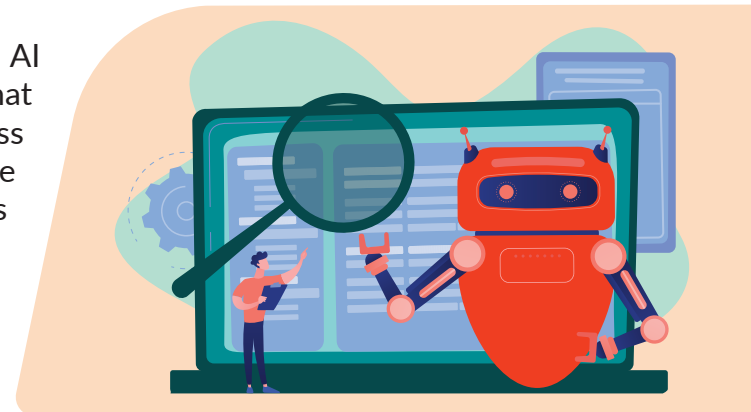

Big Data or big data is a concept that is setting a trend in the technological world and defining it in a simple way, Big Data is a large volume of digital data, both structured and unstructured that comes from different sources.

Big Data and real-time analytics make it possible to make decisions immediately and accurately, getting ahead of the competition and using them to identify new opportunities.

Machine Learning

Machine Learning is a discipline in the field of AI (Artificial Intelligence), which creates systems that identify patterns from millions of data to process predictions. Thanks to the algorithms that the system learns, it makes autonomous decisions without human intervention.

Internet of things

At iDrix Technology, we enable the digital interconnection of everyday objects with the internet, intelligently connecting things and people. The IOT (Internet of Things) is a digital interconnection network between everyday physical elements (smartphones, tablets, PCs, refrigerators, kitchens, washing machines, etc.), to the Internet, giving rise to the exchange of data between them, facilitating Capturing key device usage data to detect patterns, make recommendations, improve efficiencies, and create user experiences.

Informatic Security

We offer you a comprehensive solution to protect the privacy, security and integrity of the equipment, computer systems and the information stored in them.

We provide constant training to all people so that they understand the attack techniques and tools currently performed by hackers, computer forensics, wireless hacking, malware analysis, engineering penetration tests, among others; as well as help you to be an expert in information security methodologies.
